

145. Smart Crime Analytics & Police Investigation System

Industry: Law Enforcement & Public Safety

Problem Statement:

Law enforcement agencies require a platform to analyze crime data, manage investigations, track criminal records, and support predictive policing initiatives.

Technical Implementation:

- Sorting Algorithms: Rank crime cases by severity.
- Searching Algorithms: Retrieve criminal and case records.
- Stack: Manage investigation rollback procedures.
- Queue: Process crime reports.
- BST & AVL Trees: Store law enforcement databases.
- BFS & DFS: Analyze criminal networks.
- Hashing: Enable rapid suspect identification.

Product Building:

Develop a crime analytics dashboard displaying cases, criminal profiles, investigation status, crime patterns, and predictive insights.

Pricing Strategy:

- Prioritize high-severity crimes.
- Optimize police resource allocation.
- Reduce investigation delays.
- Improve crime prevention strategies.
- Enhance public safety.
